Summary

Software Development Engineer 2 with 4.8+ years of experience building scalable full-stack (MERN) applications using React, Node.js, and MongoDB. Strong expertise in designing RESTful APIs, cloud-native systems on AWS, and backend services using Python. Specialized in AI-driven automation with OpenAI (GPT-5.2, Vision), reducing manual workflows by up to 80%. Proven track record of delivering secure, high-performance, production-ready applications.

Techincal Skills

Languages: JavaScript (ES6+) | TypeScript | Python | HTML5 | CSS3

Frontend: React.js | Next.js | Astro.js | Tailwind CSS

Backend: Nest JS | Flask | FastAPI | Express JS

Databases: MongoDB | PostgreSQL | MySQL | DynamoDB | Milvus (Vector DB)

Cloud & DevOps: AWS (Lambda | SQS | EventBridge | CloudFront | Step Functions | S3 | API Gateway | Glue | Secrets Manager) | Azure | Terraform | Docker | GitHub Actions | Vercel

AI & Automation: LLMs | VLMs | Prompt Engineering | OCR & Document Intelligence | RAG | Embeddings | CLIP | LangChain | Agentic Workflows | Tool Calling | Multimodal AI

Monitoring & Analytics: Datadog | Microsoft Clarity | CloudWatch | Sentry

Integrations: Salesforce API | GitHub API | LinkedIn API | Facebook API | Cloudflare Turnstile

Tools: Git | GitHub | CodeCommit | Bitbucket | Jira | Confluence | Storyblok

Work Experience

Software Development Engineer 2

In Cresco Tech

OCT 2022 - Present

Bangalore, India

Global University Systems

- **GUS (Admin + Automation + AI):** Built a full-stack course pricing & discount management platform using **React**, **TypeScript**, and **Flask**, handling **hundreds of courses across regions and intakes**.
- Developed high-performance data tables with **TanStack Table** featuring filtering and pagination, **reducing admin lookup time by 60%+**.
- Integrated the **OpenAI** for course content generation, **reducing manual effort by about 80%**.
- Implemented **JWT**-based RBAC authentication, ensuring secure and scalable access control.
- **Anabin & ECCTIS Automation System:** Built a **Flask**-based compliance API to automate university recognition checks (H+, H-, H+/-), replacing manual workflows.
- Developed **Playwright** automation with session reuse, **reducing latency by about 40%**.
- Designed AI-based qualification matching with confidence scoring, **improving accuracy by 35%+**.
- Enabled audit-ready verification using screenshot pipelines and optimized caching.
- **Chrome Extensions (BSBI + GISMA):** Built production-grade **Chrome Extensions (MV3)** automating student application workflows, **saving 3–5 hours per day per admin**.
- Automated document extraction using **PDF.js**, **reducing processing time by 50%+**.
- Integrated AI-based document classification across **17+ document types** with **95% accuracy**.
- Reduced manual data entry by **70%** and improved processing speed by **7x**.
- Achieved **99.9% uptime** using local caching and retry mechanisms.
- **AI Document Processing (CampusNet + BGV System):** Built AI-powered document validation APIs using **GPT-4 Vision** and OCR, extracting structured data from multiple document types.
- Designed orchestrator-based pipelines for multi-document classification, **eliminating manual intervention**.
- Improved classification accuracy by **40%+** across complex documents including payslips, EPFO records, and certificates.
- Implemented fraud detection using cross-document validation with **Anabin** integration, **reducing compliance effort by 60%+**.
- **Webster University Application Portal:** Led full-stack development using **Nest JS**, **React**, and **MongoDB**, digitizing the complete admissions lifecycle.
- Built secure **JWT** authentication with HTTP-only cookies and CSRF protection, eliminating token vulnerabilities.
- Designed a multi-step application flow with resume capability, reducing drop-offs.
- Implemented an email system with encryption and automated campaigns using **SendGrid**.
- Containerized the platform using **Docker** and **Nginx**, delivering optimized production builds.

EF Academy

- Spearheaded the development of a high-traffic, multilingual marketing site, significantly enhancing global user engagement.
- Led the migration from TIBCO to AWS Glue, reducing annual costs from **\$24,000** to **\$840 (96.5% savings)**, and optimizing data integration efficiency with automated, scalable pipelines.
- Developed a **Prospect Uploader** enabling the marketing team to upload **10,000+ leads** via CSV with **multilingual support**. Integrated **AWS Lambda & EventBridge** with **Salesforce CRM** and built an **email alert system** for upload status. Implemented validation error handling with a clean UI to view and edit failed records, receiving a **”Wow”** reaction from the client.
- Developed **Prospect Viewer** to list all user leads, display validation failures, and alert stakeholders. Enabled viewing of essential business data for use in form values.
- Discovered and implemented a translation tool in **Storyblok with my team**. This tool has been effectively used in our projects, demonstrating my ability to identify and utilize useful resources.
- Received client appreciation for the successful implementation and usage of the translation tool, highlighting my commitment to enhancing project efficiency and client satisfaction.
- Engineered robust and scalable solutions using Next.js, Storyblok, and AWS, accommodating over **1.25 million monthly users** in more than **23+** languages.

Incresco and Camped Marketing Site

- Led the revamp of the Incresco marketing site and developed the Camped site with customizable UIs using Astro and Storyblok, enhancing content management and flexibility.
- Achieved 100% performance, accessibility, and best practices scores for the site.
- Optimized and improved **SEO and sitemap generation**.

Planet SIM and Planet Business

- Directed the development of 'Planet SIM', an IoT-based app for managing apartment utilities, enhancing performance with real-time updates via SignalR
- Managed 'Planet Business', focusing on real-time tracking and management of water services, integrating Firebase authentication and REST API.

Software Development Engineer 1

MAY 2022 - SEP 2022

IncrescoTech

Bangalore, India

Global University Systems

- **Edvanza**: Led a frontend team of 4 developers, training, teaching, assigning tasks, and mentoring them while delegating responsibilities effectively.
- Played a key role in the ongoing development of the Edvanza project, contributing to strategic planning and execution of key modules in alignment with broader business objectives.
- Served as a Technical Panelist at Incresco, conducted interviews for over 30 candidates with diverse levels of experience to identify and recruit top talent.
- Conducted code reviews for 37% of pull requests, providing constructive feedback to uphold code quality and consistency.

Software Development Engineer

JUN 2021 - MAY 2022

IncrescoTech

Bangalore, India

Global University Systems

- **Edvanza**: Focused on bug fixing initially to understand the project structure, ensuring the development of reusable and scalable applications for both mobile and web platforms using React Native and Next.js.
- Took primary responsibility for the development of the 'Jobs' and 'Learn' modules on both mobile (iOS and Android) and web applications.
- Successfully completed 1300+ Pull Requests (PRs) in Git during the initial stage of my career.
- Created a marketing site using Next.js and Tailwind CSS, effectively promoting the platform and enhancing its visibility.

Education

Sri Krishna College of Technology, Coimbatore

2018 - 2022

B.Tech in Information Technology

CGPA: 8.01/10

Honors/Awards

2021 - Outstanding contribution and demonstrating strong ownership, IncrescoTech
